Patented cleaning technology.
Powerful suction.

Combines the 78,000rpm Dyson digital motor V2 with patented Radial Root Cyclone™ technology, for powerful suction.

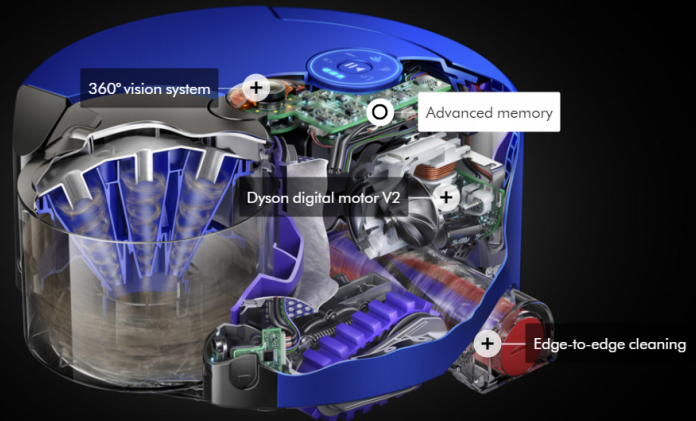

Intelligent technology

Advanced memory

A powerful quad core processor allows the robot to create a map of your home and update it during each clean. 8GB of flash memory; 32 times that of its predecessor enables continuous learning and improvement during the clean.

[Next technology >](#)

Learns and adapts to your home.

Our engineers made the robot capable of heuristic – or learning – behaviour. It continually refines a map of your home, using its memory to evaluate where it should clean next, and instructions you've given it, and how to clean each area most effectively.

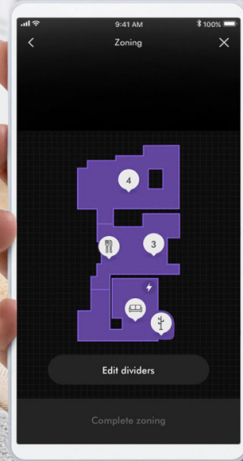

Filters allergens and expels cleaner air²

Whole-machine filtration captures particles as small as 0.3 microns, expelling cleaner air.

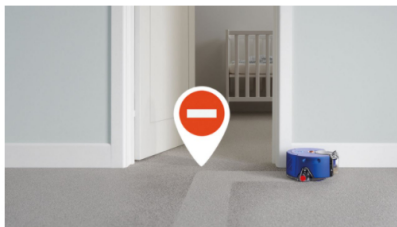

Create and customise zones in your home using the Dyson Link app

Define zones and choose how and when your robot cleans. Connect to the Dyson Link app to unlock intelligent features.

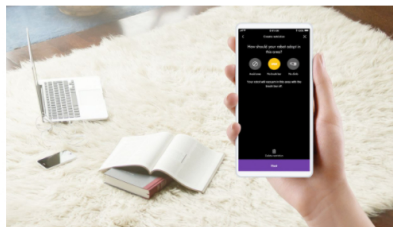

Features

Add no-go zones

Customise your robot's behaviour. Including telling your robot which zones to avoid altogether.

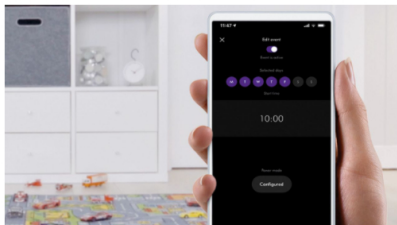

Set the rules

Protect delicate items with no-climb areas. Or switch off the brush bar motor in quiet zones or over long-haired rugs.

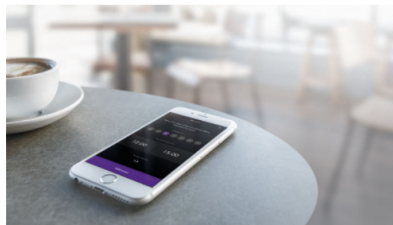

Power where you need it

Choose High mode for powerful suction, Max mode for even deeper cleans, or Quiet mode for low-noise cleaning.

Schedule your cleans

Fit your cleans around you. Set a time, day and frequency to suit each zone in your home.

Connect and clean. Wherever you are.

Connect quickly and easily using Bluetooth® wireless technology to control your clean, whether you're home or not.

See where the robot has cleaned

Keep track of where your robot has been, with maps that show its path around your home.

Always improving

Wi-Fi capability lets your robot receive over-the-air software updates, so it's always using the latest
